

ABOUT ME.

My name is Ali. I am a visual designer, UX / UI designer, graphic designer, and web designer. I have 4 years of experience as a graphic designer, 2 years as a UX/UI designer as well as a web designer and digital designer.

When it comes to design I want everything to be perfect and extremely easy to understand.

Like other people, I love beautiful design, simple and elegant design, however, **most of the designers seem to forget about the problem that they should have to solve, and some of them only care about the aesthetic part.**

I am a designer but unlike any other designer, I design to solve a problem not just make everything looks pretty.

I am a hard worker, fast learner, detail oriented and always curious when it comes to new design trend and new technology.

I started as an illustrator when I was a kid. I received my **bachelor degree in graphic design in 2010 and master degree in UX design and interactive design in 2017**

I have been working with various of design tools and software that would help me create a sketch, building prototype and received feedback from users, such as **Adobe CC, sketch, Invision, and wireframing tools such as Axure, and Balsamiq.**

If I am your type of guy you are looking for, why don't we work together, shoot me an email or give me a call.
